PROFESSIONAL SUMMARY

Application Support Engineer with 8 months of hands-on experience in production support, incident management, and root cause analysis for business-critical enterprise applications. Skilled in monitoring application health, analyzing logs, validating deployments, and resolving P1/P2 incidents within SLA in fast-paced, cross-functional environments. Strong SQL Server and Python background used daily for troubleshooting, data validation, and automation support. Actively building hands-on proficiency in Dynatrace, ServiceNow, Grafana, and Linux administration to strengthen enterprise-grade observability and incident-management capability.

CORE COMPETENCIES

Production Support • Incident Management • Root Cause Analysis (RCA) • Application & Bot Monitoring • Log Analysis • Deployment & Post-Release Validation • Application Health Checks • SLA Adherence • SQL Query Optimization • Database Troubleshooting • Cross-Functional Collaboration • Stakeholder Communication • Process Improvement

PROFESSIONAL EXPERIENCE

Python Automation Developer | *KTech Products*

November 2025 – Present | 8 months

- Provide application support for enterprise automation applications and business-critical production processes, acting as escalation point for high-severity issues.
- Investigate production incidents end-to-end and perform root cause analysis (RCA) to identify, triage, and resolve automation failures within SLA.
- Monitor bot executions, application logs, SQL Server databases, and workflow status in real time to proactively catch issues before they escalate — the same 'eyes and ears' discipline central to production monitoring.
- Own incident lifecycle from detection through resolution for invoice processing, PeopleSoft integrations, and automation workflows, coordinating with QA and development teams for faster fixes.
- Perform SQL analysis using Joins, CTEs, Stored Procedures, and Update queries to troubleshoot data-related production issues.
- Support post-deployment validation and application health checks after production releases to confirm stability.
- Collaborate closely with business users, QA, and developers during critical incidents, contributing to bridge-call style coordination and rapid resolution.
- Implement structured Python logging to capture application events and speed up troubleshooting and RCA.
- Debug and enhance Playwright automation scripts to improve reliability, reducing recurring incident volume.
- Participate in issue triage and incident analysis, driving corrective and preventive actions for recurring production issues.
- Create and maintain runbooks, troubleshooting guides, and operational documentation for the support team.
- Perform backend data validation using SQL Server Management Studio (SSMS) to verify fixes and deployments.

Key Projects

Enterprise Invoice Automation — Python, SQL Server, Playwright

1. Production support and incident management for business-critical applications
 2. Root cause analysis (RCA) to identify and resolve recurring issues
 3. Real-time monitoring of application and bot executions
-

4. Log analysis and troubleshooting to ensure system stability
5. Deployment validation and post-release application health checks
6. SLA adherence across production and UAT environments
7. Hands-on experience with PeopleSoft (Voucher & Invoice Modules)
8. ERP integration and Accounts Payable (AP) automation support
9. Procure-to-Pay (P2P) workflow coordination
10. Invoice digitization and RPA-based process automation
11. SQL query optimization and database troubleshooting
12. Cross-functional collaboration and stakeholder communication
13. Continuous process improvement and operational efficiency

TECHNICAL SKILLS

Monitoring & Observability: Application Monitoring, Production Monitoring, KPI/SLI Tracking, Log Analysis, Monitoring Dashboards, Python Logging

Currently Building Hands-On Proficiency: Dynatrace (APM & observability), ServiceNow (Incident & Ticket Management), Grafana, Linux Administration

Production Support: Incident Management, Root Cause Analysis, Deployment Validation, UAT Support, Application Health Checks, Troubleshooting Support

Programming: Python, SQL, Java (Basics)

Database: SQL Server, SSMS, SQLite

Automation: Playwright, Python Automation, RPA

Tools: SQL Server Management Studio, Visual Studio Code, Git, GitHub

ACHIEVEMENTS

- Successfully resolved multiple production incidents across enterprise automation workflows while maintaining SLA compliance.
- Reduced recurring automation failures through SQL optimization, code fixes, and preventive corrective actions.
- Improved troubleshooting turnaround time by implementing structured application logging and monitoring practices.
- Supported business-critical applications with minimal downtime across production and UAT environments.

EDUCATION

B.Tech in Electronics and Communication Engineering (Specialization in AI & ML)

GITAM University | 2021 – 2025

CERTIFICATIONS

- Microsoft Azure Fundamentals Certification
- Python in Machine Learning Certification
- GenAI Powered Data Analytics Job Simulation — Tata
- Software Engineering Job Simulation — JP Morgan Chase & Co.
